Tools and Equipment			2	1	1	4	Clean tools and equipment after each use.	All Staff	April 1/20

Notes:

- **SEVERITY** – Depending on how serious the outcome if something went wrong – rate 1, 2 or 3 (3 being worst)
- **PROBABILITY** – how likely is it that something will go wrong – rate 1, 2 or 3 (3 being most likely)
- **FREQUENCY OF EXPOSURE** – how many people, how often exposed, rate 1, 2, or 3 (3 being most often or lots of people)
- **TOTAL** – total the previous 3 columns: 3-4 is LOW Priority 5-6 is MEDIUM priority 7-9 is HIGH Priority
- **Address HIGH priority hazards first, then MEDIUM priority hazards. LOW priority hazards may not require attention at this time; they may simply require monitoring.**
- Review the controls in place and consider what should be added. Try engineering controls (guards, screens, mufflers, ventilation, etc.) before relying on things like administrative controls, warning signs, pylons, reminder notes, masks, gloves, etc.
- Determine how quickly the recommended controls should/can be put in place (remember to set reasonable goals) and who is responsible to ensure it gets done
